

Amendments to the Specification

Please amend the paragraph appearing at page 2, lines 11-13, as follows:

It is preferred that the resultant resistivity of the tungsten film is less than $11\mu\text{ohm cm}$. The power supplied to a target of 300mm diameter ~~maybe~~ may be above 3kW being a power density of about ~~1-watt-cm^{-2}~~ $3.5\text{ watts per cm}^2$.
